Evaporative condensers

FR.154.01-C

CGC Series

The CGC series have a wide range with 39 models to fulfill the most demanding refrigeration installations. The centrifugal fans are a guarantee of low noise level. Thanks to the chosen fan diameters we have reduced its quantity, reducing the power consumption and maintenance jobs. Moreover, having the fans in one side has the advantage that you are more flexible to install them next to a wall or one side by side the other one.

Like all our evaporative cooling equipment manufactured on metall, we can offer them as an standard on galvanized Steel with a prime coat specially designed for its specific job. We can also offer stainless Steel under request, with an extra protection for the basin called TEVA Prot.

Those projects that they require a very low noise level, they have their partner on the GCG series, we can offer silencers at the air outlet either at the air inlet.

All our evaporative condenser batteries are under an strict quality control during the manufacturing process to achieve the existing European Union Directives for the high-pressure equipment.
